Samyoj

Market-Driven Product Requirements

The 2026 market is moving toward **conversation + CRM + automation + AI + lead acquisition** in one workspace. Current platforms increasingly combine WhatsApp, Instagram, Facebook, shared inboxes, workflows, AI agents, CRM and analytics. Samyoj should not be positioned as simply a “WhatsApp API platform.”

Samyoj = Customer acquisition + conversations + CRM + automation + AI + analytics for businesses across Meta channels.

1. Unified Inbox — Core

Goal: *One place to manage every customer conversation.*

Channels: WhatsApp · Instagram DM · Facebook Messenger · (Later: Email / SMS / Web Chat)

Requirements

- Shared team inbox
- Assign conversation to agent
- Internal notes · Tags · Conversation status (Open / Pending / Closed)
- Search conversations · Customer history · Media / files
- Read / delivery status · Agent availability

Main use case: Customer messages on Instagram → conversation appears in Samyoj → sales agent replies → later customer messages on WhatsApp → agent can see the full customer history. This cross-channel / unified inbox is already a major market expectation.

2. CRM + Lead Management

Don’t make Samyoj just a messaging tool. Every conversation should potentially become a lead / customer.

Contact fields: Name · Phone · Email · Company · Tags · Source · Custom fields · Notes · Conversation history

Lead stages: New → Contacted → Qualified → Proposal → Won / Lost

Lead sources: WhatsApp · Instagram · Facebook · Meta Ads · Website · Manual · API

Use case flow: Instagram Ad → Lead → Samyoj CRM → WhatsApp conversation → Sales agent → Qualified → Proposal → Won. This is far more valuable than simply storing messages.

3. Automation

One of Samyoj’s major features. Instead of employees doing repetitive work manually:

EVENT → CONDITION → ACTION

Example flows

- Instagram comment “PRICE” → Detect keyword → Send DM → Create lead → Assign sales agent
- New WhatsApp message → Create contact → Check source → Assign sales team → Send welcome message
- Lead contacted → No response for 24h → Follow-up → Still no response → Assign agent

Requirements: Trigger builder · Conditions · Actions · Delays · Branching · Tags · Assignment · Webhooks · API actions · Template messages · Human handoff

No-code workflow builders are already a common expectation in this category.

4. Meta Ads → Lead → Conversation

Connect the entire funnel rather than just showing Ads analytics.

Funnel: Meta Ad → Lead → Samyoj → WhatsApp / Instagram → Sales → Conversion

Requirements: Connect Ad Account · Campaigns · Ad Sets · Ads · Spend · Impressions · Clicks · Leads · CPL · Conversion

Lead Ads automation: Facebook / Instagram Lead Form → Samyoj → Create Lead → Assign Agent → Start Conversation

Attribution example: Campaign “Diwali Offer” · Ad “Video 03” · Spend Rs. 25,000 · Leads 420 · Qualified 120 · Sales 31 · Revenue Rs. 4.8L — connecting marketing → sales → revenue.

5. AI Layer

The market is moving quickly toward AI agents, AI assistance and AI-powered automation. Build AI around actual business workflows — not a generic ChatGPT chatbot.

AI Agent — Business provides website, FAQs, product catalogue, pricing, documents, policies, knowledge base. AI answers customers on WhatsApp / Instagram.

AI Lead Qualification — e.g. Customer: “I need a 2BHK” → AI asks Budget / Location / Timeline → Lead Score 82 → Assign to Sales.

AI Handoff — When AI detects low confidence on a complex question, route to a human agent.

AI Summaries — Agent opens conversation and sees: “Customer wants a 2BHK in Mumbai, budget Rs. 1.2Cr, looking to purchase within 2 months.” Extremely useful operationally.

6. Marketing & Engagement

Enable businesses to re-engage their customer database.

WhatsApp: Templates · Broadcast / campaigns · Audience segmentation · Scheduled campaigns · Delivery / read analytics · Opt-in management

Instagram: Post publishing · Reels · Stories · Comment automation · DM automation · Story mention automation

Facebook: Page posts · Messenger · Comments · Lead Forms

The Most Important Requirement: Customer 360

Instead of separate WhatsApp / Instagram / Facebook contacts, Samyoj should represent a single **CUSTOMER** with all channels, conversations, leads and sales linked underneath.

Customer: Rahul

Channels: WhatsApp · Instagram | Lead: Interested · Rs. 50k budget | Source: Instagram Ad

Last interaction: WhatsApp yesterday | Assigned: Sales Agent A

AI Summary: Interested in Product X · Asked about pricing · Follow-up required

That is much closer to a real customer engagement platform than a WhatsApp API wrapper.

Simplified Product Structure

SAMYOJ

|-- Inbox (WhatsApp · Instagram · Facebook)
|-- Contacts
|-- Leads / CRM
|-- Campaigns (WhatsApp · Instagram · Meta Ads)
|-- Automation
|-- AI Agent
|-- Ads (Campaigns · Leads · Analytics)
|-- Analytics
+-- Settings (Channels · Team · Templates · Integrations · Billing)

Complete Customer Journey

META ADS → LEAD → Instagram / WhatsApp → UNIFIED INBOX → CRM → AI / AUTOMATION → SALES TEAM → DEAL → REVENUE → ANALYTICS

Recommended Development Phases (MVP Roadmap)

Do not build everything at once. Ship in clear phases so the first version stays focused.

Phase 1	WhatsApp + Unified Inbox + CRM + Team
Phase 2	Instagram + Facebook Inbox
Phase 3	Automation + Comment / DM automation
Phase 4	Meta Lead Ads → CRM
Phase 5	AI Agent + AI qualification
Phase 6	Meta Ads Dashboard + attribution
Phase 7	Campaigns + advanced analytics

This gives Samyoj a clear product direction without turning the first version into a huge “everything Meta” platform.

Consistent with what current competitors are converging toward: unified channels, CRM / lifecycle tracking, automation, AI and analytics — rather than WhatsApp messaging alone.
